## ANC SONOGRAM (NT SCAN)

Date: 31.10.2024

Single live intrauterine foetus with changing presentation is seen at the time of examination.

Placenta is adequate in amount.

Uterine length-3.9 cm. Cesarean scar seen.

Cardiac movements are identified and foetal heart is positive.

### Uterineometry :

Heart Rates : 154 B/Min. Regular.

Measurements :	2.16	cm. Corresponds To :	13	Weeks	4	Days.
Measurements :	7.62	cm. Corresponds To :	13	Weeks	1	Days.
Measurements :	5.70	cm. Corresponds To :	12	Weeks	4	Days.
Measurements :	0.65	cm. Corresponds To :	12	Weeks	0	Days.
Measurements :	6.32	cm. Corresponds To :	12	Weeks	5	Days.
Ultrasound Age Is	12	Weeks	6	Days.		
Date Of Delivery By Ultrasound :		05.11.2024				
Date Of Delivery By LMP :		31.10.2024				
Foetal Weight Is	57	Gms. ±	8	Gms.		

Posterior, Grade- 0.

Translucency (NT) measures: 0.9 mm, within normal limits.

seen with nasal bone length of 2.6 mm.

Amniotic fluid is normal.

Placenta reveals normal flow & spectral waveform.

Uterine arteries show normal wave form and PI.

No evidence of tricuspid regurgitation.

Level II scan; this is done only to assess fetal growth parameters fetal weight and

intrauterine foetus with changing presentation is seen at the time of examination, which corresponds, to Gestational age 12 Weeks 6 days. EDD- 05.11.2024

### Advice- Anomaly scan at 18-22 weeks.

Study has certain limitations (sometimes fetal anomalies may not get diagnosed due to nature of anomaly, Gestational age and limitations of machine thence absence of mention of foetal anomaly in study does not always rule out its presence, is not included in this scan).  
that while conducting Ultrasonography/ Image, Scanning on patient and her family members, the patient and her family members are not disclosed the sex of her fetus to anybody in any manner.
