ULTRASOUND REPORT

PATIENT'S NAME : Mrs. Lalita Devi
PART SCANNED : Whole Abdomen
REFERRED BY : Dr. Manoj Kumar , MD (BHU)

AGE / SEX: 25/F
Scan No: 09
DATE: 01/04/2024

ULTRASONOGRAPHY OF WHOLE ABDOMEN

Liver : is normal in size with a homogeneous echotexture. No evidence of any focal lesion or IHBD dilatation is seen. The portal vein is normal in diameter.

Gall bladder : is mildly distended with presence of multiple variable sized (approx. 5 to 18 mms) mobile calculus within the lumen. The gall bladder otherwise appears normal. CBD is mildly dilated (9.3 mms).

The pancreas and spleen are normal. No retroperitoneal lymphadenopathy is seen. There is no ascites.

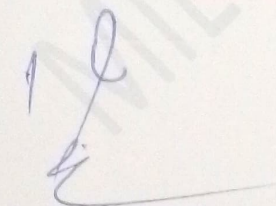

Kidneys : are normal in size, position and outline with well defined corticomedullary junction. No calculus, focal mass or hydronephrotic changes are seen. Ureters are not dilated.

The urinary bladder : is normal in outline, position and wall thickness with anechoic lumen. No calculus seen. Pre void volume of bladder at the time of scan was approx. 538 cc. Post void residual urinary volume is negligible.

The Uterus : is normal measuring approx. 8.5 x 3.3 x 4.8 cms. The endometrial and myometrial echotextures are normal. The endometrial thickness is within normal limit (Double layer of thickness 10.2 mms). Ovaries are normal.

Both iliac fossa appears normal.

IMPRESSION : Findings are consistent with : -
: Mildly distended gall bladder with multiple variable sized mobile calculi
: Mildly dilated CBD – likely to be normal variant
Adv : ALP – if raised MRCP.
