

Patient Name : MRS. T SRIDEVI

Patient Id/ Bil No. : 2405-0261

Gender/Age : Female /38 Years

Reg. Date : 10-05-2024

Referred By : DR ASSUNTHA REDDY (REG NO 03222)

Reported Date : 11-05-2024

DEPARTMENT OF RADIODIAGNOSIS AND IMAGING SONOMAMMOGRAPHY OF BOTH BREASTS

Clinical history : Check up.

Technique: Ultrasound scan of breasts was performed with 7.5 MHz linear array transducer.

Findings:

Simple cyst measuring 7.4 x 3.4 mm noted in the mammary space of right breast at 8 o clock position

Small simple cyst measuring 4 x 3.8 mm at 2 o clock position of left breast in the mammary space

Thick walled lobulated cyst measuring 31 x 18 x 21mm noted in mammary space of left breast at 11 -12 o clock position. Mild surrounding edema and few internal echoes are noted. The lesion is communicating with mammary ducts

Both breasts reveal predominantly fibroglandular parenchymal pattern with scanty fatty components.

No other discrete focal mass/ collection / inflammatory changes/dilated ducts. Rest of the pre-mammary, mammary and retromammary spaces are normal.

Both nipples, skin and subcutaneous tissues appear normal.

Both axillary regions appear normal. No significant lymphadenopathy.

Visualized pectoralis muscles appear normal.

Few bilateral axillary lymphnodes noted with preserved benign morphology. No necrosis / matting / lymphadenitis.

IMPRESSION:

- **Thick walled lobulated cyst (31 x 18 x 21mm)in mammary space of left breast at 11 -12 o clock position- Likely cyst with inspissated secretions**
- **Minimal fibro-cystic changes in both breasts**
- **Suggested clinical correlation.**
