Age risk	1:536		Nuchal translucency MoM
Biochemical T21 risk	1:2279		Nasal bone
Combined trisomy 21 risk	1:9425		Sonographer
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT
			MD
Trisomy 13/18 + NT			Trisomy 21
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 9425 women with the same data, there is one woman with a trisomy 21 pregnancy and 9424 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
