PATIENT NAME	N.RAMANISREE
AGE/SEX	26 YEARS/FEMALE
DATE	22.05.2024
REFERRED BY	DR. TRIVENI

ANTENATAL TIEFA SCAN REPORT

Maternal:

Cervix is normal. Length 3.6cm. Internal OS is normal.

Uterine artery flow is normal bilaterally.

Fetal

Single live intrauterine gestation, with good movements and cardiac activity is noted.

Biparietal diameter	4.56	cm	19	weeks	6	days
Head circumference	17.70	cm	20	weeks	2	days
Abdominal circumference	15.07	cm	20	weeks	3	days
Femoral length	3.21	cm	20	weeks	0	days

GA age as per scan:	20 weeks 01 day
EDD by us:	08.10.2024
Placenta:	Posterior, upper segment, Grade-II maturity.
FHR: (bpm)	155
Fetal Weight: (grams)	335+/-49

Cranium:

Fetal cranium shape is normal and well ossified.

Intracranial contents are normal. Midline falx normal. Cavum septum pellucidum is seen.

Lateral ventricles with choroid plexus are normal. Posterior fossa normal.

Cerebellum and vermis are normal. Cisternal magna is normal.

Spine:

Vertebrae and spinal canal are normal in longitudinal and transverse scans.

No obvious evidence of open neural tubal defect.

Face:

Nasal bone is noted. Mouth is normal and No obvious evidence of facial cleft seen.

Both orbits are normal. Inter-orbital distance is normal.

P.T.O

PATIENT NAME	N.RAMANISREE
AGE/SEX	26 YEARS/FEMALE
DATE	22.05.2024
REFERRED BY	DR. TRIVENI

Neck: neck of the fetus is normal.

Thorax:

Fetal lungs are normal. Both the diaphragms are normal.
No evidence of SOL in the thorax. No evidence of pleural effusion.

Cardia:

Cardia is in mid-position. Cardiac axis is normal. 3 vessel view is normal.
Outflow tracts are normal. The descending aorta is to the left of the midline.
No evidence of pericardial effusion.

Abdomen:

Status of the abdomen is normal. Stomach bubble is noted.
Bowel pattern normal for gestational age.

Short femur	Absent
Echogenic bowel	Absent
Increased nuchal fold	Absent
Basal bone	Normal size
Microcephaly	Absent

P.T.O

PATIENT NAME	N.RAMANISREE
AGE/SEX	26 YEARS/FEMALE
DATE	22.05.2024
REFERRED BY	DR. TRIVENI

IMPRESSION:

Single live intrauterine gestation of around 20 weeks 01 day in available presentation with no obvious anomaly at present scan.

DECLARATION BY DOCTOR / PERSON CONDUCTING ULTRASONOGRAPHY / IMAGE SCANNING

I, DR. PRIYANKA, declare that while conducting ultrasonography / image scanning on Mrs. N.RAMANISREE, I have not detected nor disclosed the sex of her fetus to her or to anybody in any manner.

No anomalies cannot be ruled out by this scan, anomalies of nail, distal to wrist & feet, fingers are not ruled out totally by this scan. Assessment of fetal anomalies depends on fetal position, liquor volume and the period of gestation at the time of scan. This report has limitations and is not for medico-legal purpose.

Kindly bring this report on your next visit.
