

Patient data			
Name	Mrs. ARHANA	Patient ID	0012405230405
Birthday	05-08-2001	Sample ID	24254214
Age at sample date	22.8	Sample Date	23-05-2024
Gestational age	10 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	70	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	3.95 mIU/mL	2.62	
fb-hCG	60.37 ng/mL	1.07	
Risks at sampling date		Gestational age	
Age risk		10 + 6	
Biochemical T21 risk		Method	
<1:10000		CRL Robinson	
Combined trisomy 21 risk		Scan date	
<1:10000		23-05-2024	
Trisomy 13/18 + NT		Crown rump length in mm	
<1:10000		42	
		Nuchal translucency MoM	
		1.10	
		Nasal bone	
		present	
		Sonographer	
		N A	
		Qualifications in measuring NT	
		MD	
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The PAPP-A level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
