PATIENT'S NAME: MRS ANJALI JOSHI 35 Y/F

USG GRAVID UTERUS

REFERRED BY: DR MRS MEENAKSHI VARMA MD

DATE: 20.05.2024

ULTRASONOGRAPHY REPORT

(LMP 19.02.2024 EGA by LMP: 13 WKS)

There is single live fetus with normal movements and normal cardiac pulsations seen in uterine cavity, which are recorded on M Mode. FHR is 150 BPM.

Crown to rump length of fetus is 66.3 mm which corresponds to 13 wks of gestation.

BPD 22.3 mm 12 wks + 5 days

AC 65.6 mm 13 wks + 2 days

Fetal nasal bone is seen well and nuchal translucency measures 1.1 mm.

Normal ductus venosus flow seen with normal positive 'a' wave.

Limb buds are seen well with appreciable movements

Trophoblastic rim is normal in thickness and echogenicity. No evidence of separation of membranes noted.

Internal os is closed and cervix measures 3.52 cm in length.

IMPRESSION:- SINGLE LIVE INTRAUTERINE PREGNANCY CORRESPONDS TO ABOUT 13 WKS OF GESTATION.

Declaration of Doctor / Person conducting Ultrasonography/ Image scanning

I, Dr Rakesh Mishra declare that while conducting ultrasonography / Image scanning on Mrs Anjali Joshi I have neither detected nor disclosed the sex of her foetus to anybody in any manner.

Dr Rakesh Mishra

M.D.
