HISTOPATHOLOGY REPORT

Specimen : Left microdochectomy.

Clinical : ? Ca breast

Gross : Left microdochectomy - Received left unoriented microdochectomy specimen measuring 6x5.5x4.5 cm. External surface is covered with fatty tissue and is rough. Cut surface shows a lesion with dilated ducts and congested blood vessels, measuring 2.4x2.4x1.5 cm with wire localisation. Distances of circumferential resections margins from the lesion are : 1.0 cm, 0.7 cm, 0.8 cm, 0.5 cm, 1.8 cm & 2.5 cm. Representative sections submitted.

Sections - A - 1 cm margin, B - 0.7 cm margin, C - 0.8 cm margin, D - 0.5 cm margin, E - 1.8 cm margin, F - 2.5 cm margin, (G-I) - Lesion.

Diagnosis : Left microdochectomy -

- Extensive DCIS identified of cribriform and comedonecrosis type, of high nuclear grade.
- No invasive malignancy seen.
- Duct ectasia noted containing luminal secretions admixed with foamy macrophages, hemosiderophages, multinucleate giant cells. Focal microcalcification noted.
- Inked circumferential resection margins are free of tumor.
