SURVEY

Presentation- Cephalic

Placenta -Posterior grade-2(Away From Os)

Liquor -Adequate(AFI- 12.5CM)

Umbilical Cord - 3 vessel Cord seen.

Fetal Activity present

Cardiac activity present

THIS REPORT IS AN OPINION NOT THE FINAL DIAGNOSIS IT SHOULD BE CORRELATED CLINICALLY WITH HISTORY AND EXAMINATION OF THE PATIENT. IN CASE OF ANY DISCREPANCY A REVIEW CAN BE ASKED. NOT VALID FOR MEDICOLEGAL PURPOSES.

ANEUPLOIDY MARKERS

Nasal Bone seen.
Nuchal Fold :Normal

FOETAL ANATOMY :

HEAD

Midline falx seen.
Both lateral ventricles appeared normal.
Posterior fossa appeared normal.
Both lateral ventricles is measures 5.2mm
Cisterna magna is measures 5mm.
The cerebellum is normal
Corpus Callosum is seen.

NECK

Fetal neck appeared normal

SPINE

Entire spine is visualised in longitudinal and transverse axis.
The vertebrae and spinal canal appear normal.

FACE :

Foetal face seen in coronal and profile views.
Both orbits, nose and mouth appear normal.

THORAX :

The heart appears in mid position.
Normal cardiac situs.
The four chamber view is normal.
The out flow tract appeared normal.
Left Ventricle Shows Tiny Echogenic Foci
Both lungs seen.
No evidence of pleural or percardial effusion.
No evidence of SOL in the thorax.

ABDOMEN :

Abdominal situs appeared normal.
Stomach, both kidneys and bladder are normal.
right renal pelvis is mildly dilated measuring 6mm , Left renal pelvis measures 3.8mm
The portal vein is normal.
No evidence of ascites. No abdominal wall defect.

EXTREMITIES :

All fetal long bones visualized and appear normal for the period of gestation

SAMYAK ULTRASONOGRAPHY CLINIC

FOETAL DOPPLER

BILATERAL MATERNAL UTERINE ARTERIES PI IS NORMAL
Right Ut Art PI- 0.81 , Left Ut Art PI-0.91
Average Uterine PI -0.86

IMPRESSION :

- THERE IS SINGLE, LIVE, INTRAUTERINE GESTATION OF 20 WKS 6 DAYS
- MILDLY DILATED RIGHT RENAL PELVIS MEASURING 6MM
- TINY ECHOGENIC FOCI IN LEFT VENTRICLE
- U/S E.D.D-19/10/2024
- This report does not include 2D fetal echo (Foetal echo cardiography is advised for detailed fetal cardiac evaluation)

Rev follow up scan after 3 wks

DR. ROOPVARSHA JAIN
CONSULTANT RADIOLOGIST
REG.NO.10148

While conducting ultrasonography on mrs, **PALAK MEHRA** I have neither detected nor disclosed that sex of her fetus to anybody in any manner.

DR. ROOPVARSHA JAIN
CONSULTANT RADIOLOGIST
REG.NO.10148

Please note the limitations of Obstetric Ultrasound Scanning

- Scanning of the foetal anatomy can be affected by various factors like maternal abdominal wall thickness & tissue echogenicity, scars, fetal lie, amniotic fluid volume, fetal gestation and other factors.
- Therefore all the anomalies may not be necessarily be detected.
- A "Normal" scan of the fetus does not mean that the fetus will be normal at birth as the fetus is developing all the time.
- This report does not include 2D foetal echo.
