## First Trimester Screening Report

**Kalpana Fetal Medicine and Scan Center**

*Protecting the Precious*

Ref: 173593

Dr. A0016580

Date of birth: 23 May 2002, Examination date: 14 June 2024

Address: NALGONDA

Hospital no.: KFC14415

Mobile phone: 6302112077

Referring doctor: DEEPTHI

### Maternal / Pregnancy Characteristics:

Racial origin: South Asian (Indian, Pakistani, Bangladeshi).

Parity: 0.

Maternal weight: 41.0 kg; Height: 152.0 cm.

Smoking in this pregnancy: no; Diabetes Mellitus: no; Chronic hypertension: no; Systemic lupus erythematosus: no; Antiphospholipid syndrome: no; Patient's mother had preeclampsia: no.

Method of conception: Spontaneous;

Last period: 13 March 2024

EDD by dates: 18 December 2024

### First Trimester Ultrasound:

US machine: E 6. Visualisation: good.

Gestational age: 13 weeks + 2 days from dates

EDD by scan: 18 December 2024

| Findings                  | Alive fetus  |
|---------------------------|--------------|
| Fetal heart activity      | visualised   |
| Fetal heart rate          | 172 bpm      |
| Crown-rump length (CRL)   | 66.0 mm      |
| Nuchal translucency (NT)  | 1.5 mm       |
| Biparietal diameter (BPD) | 26.0 mm      |
| Ductus Venosus PI         | 1.000        |
| Placenta                  | anterior low |
| Amniotic fluid            | normal       |

### Chromosomal markers:

Nasal bone: present; Tricuspid Doppler: normal.

### Fetal anatomy:

Skull/brain: appears normal; Spine: appears normal; Heart: Appears normal; Abdominal wall: appears normal; Stomach: visible; Bladder / Kidneys: visible; Hands: both visible; Feet: both visible.

|                      |         |                         |
|----------------------|---------|-------------------------|
| Uterine artery PI:   | 1.50    | equivalent to 0.900 MoM |
| Endocervical length: | 34.0 mm |                         |

### Risks / Counselling:

Patient counselled and consent given.

Operator: Lekkala Kalpana, FMF Id: 173593

| Condition                                | Background risk | Adjusted risk |
|------------------------------------------|-----------------|---------------|
| Trisomy 21                               | 1: 1068         | 1: 5308       |
| Trisomy 18                               | 1: 2635         | 1: 7983       |
| Trisomy 13                               | 1: 8257         | 1: 5974       |
| Preeclampsia before 34 weeks             |                 | 1: 717        |
| Fetal growth restriction before 37 weeks |                 | 1: 101        |

# 1st Trimester Screening Report

## Kalpana Fetal Medicine and Scan Center

The background risk for aneuploidies is based on maternal age (22 years). The adjusted risk is the risk at the time of screening, calculated on the basis of the background risk and ultrasound factors (fetal nuchal translucency thickness, fetal heart rate).

Risks for preeclampsia and fetal growth restriction are based on maternal demographic characteristics, medical and obstetric history and uterine artery Doppler. All biophysical markers are corrected as necessary according to several maternal characteristics including racial origin, weight, height, smoking, method of conception and parity.

The estimated risk is calculated by the FMF-2012 software (version 2.81) and is based on findings from extensive research coordinated by the Fetal Medicine Foundation (UK Registered charity 1037116). The risk is only valid if the ultrasound scan was performed by a sonographer who has been accredited by the Fetal Medicine Foundation and has submitted results for regular audit (see [www.fetalmedicine.com](http://www.fetalmedicine.com)).

### Comments

Single live intra uterine fetus corresponding to 13 weeks 2 days.

Down syndrome screen negative based on NT scan.

Suggested DOUBLE MARKER.

Suggested TIFFA SCAN at 19 to 20 weeks. ( July 27th to 30th )

I, Dr. L. Kalpana Reddy, declared that while conducting ultrasonography / imaging scanning on Mrs. MANASA, I have neither detected nor disclosed the sex of fetus to any body in any manner.
