PATIENT NAME	SONAM DILARE	AGE/SEX	26 Y / FEMALE
REF BY:	DR. PREETI CHOPRA (BSC. BAMS.PGDND.MD)	DATE	05.07.2024

LEVEL II (TARGETED IMAGING FOR FETAL ANOMALIES)

LMP - 28.01.2024

GA by LMP - 22 WEEKS 4 DAYS

E.D.D. By LMP 03.11.2024

E.D.D. By scan 05.11.2024

- Single live fetus is seen with unstable presentation at the time of study.
- Fetal movements and cardiac activity are well visualized.
- Fetal heart rate is **160 beats / minute** and is regular in rhythm.
- Biometric data of the fetus is as follows -

Fetal parameters		Corresponding gestational age	
	cm	Weeks	Days
BPD	5.29	22	0
HC	19.09	21	2
AC	16.60	21	4
FL	4.02	23	0
HL	3.65	22	5
TIB	3.47	23	0
FIB	3.55	23	2
RAD	3.02	21	4
ULNA	3.27	22	4

- Mean gestational age by fetal parameter is 22 weeks 2 days.
Fetal weight is approx. 480 gms, +/- 70 gms
Amniotic fluid volume appears adequate. Cervical length is ~3.2 cm.
Placenta is **anterior**. No evidence of retroplacental collection.
Umbilical cord is showing normal "3 vessel appearance".
Mean uterine artery PI : 0.75 (normal for GA)

DETAILED ANATOMIC SCAN

• HEAD AND NECK:

- Cerebellum- normal in shape and size.
- Cisterna magna- < 10mm.
- Nuchal skin fold thickness - < 6mm.
- Choroid plexus- echogenic.
- Lateral cerebral ventricles- normal in calibre.
- Midline falx- present.
- Cavum Septum Pellucidum - present.

PATIENT NAME	SONAM DILARE	AGE/SEX	26 Y / FEMALE
REF BY:	DR. PREETI CHOPRA (BSC. BAMS.PGDND.MD)	DATE	05.07.2024

FACE:

- The side profile is normal with normal chin and lips scan.
- The nose and lips are normal.
- Bilateral orbits are seen normal in size with normal inter orbital distance.

CHEST:

- Four chambered heart& 3VV- present.
- RVOT (right ventricular outflow tract) – is seen normally.
- Aorta outflow from left ventricle is seen.

ABDOMEN:

- Stomach bubble seen on left side.
- Bilateral kidneys are normally visualized.
- Urinary bladder is normal in shape and outline.

SPINE:

- The cervical, thoracic, lumbar and sacral spine was seen in sagittal and longitudinal views and vertebral segments were visualized normally with normal skin seen covering from neck to sacrum.
- No abnormal vertebral defects /splaying seen.

EXTREMITIES:

- The fetal upper limbs x 2.
- Radius / ulna / humerus x 2.
- Hands x 2.
- Fetal lower limbs x 2.
- Tibia / fibula / femur x 2.
- Feet x 2.
- The echogenicity of visualized bones of bilateral upper and lower limbs is normal with normal shape, movements and position.

PATIENT NAME	SONAM DILARE	AGE/SEX	26 Y / FEMALE
REF BY:	DR. PREETI CHOPRA (BSC. BAMS.PGDND.MD)	DATE	05.07.2024

IMPRESSION:-

SINGLE LIVE FETUS WITH UNSTABLE PRESENTATION WITH MEAN GESTATIONAL AGE OF 22 WEEKS 2 DAYS WITH NO OBVIOUS GROSS CONGENITAL ANOMALY SEEN ON PRESENT SCAN.

ADVICE:- QUADRUPLER MARKER TEST.

NOTE:-

- The overall sensitivity rate of detection of congenital anomalies by USG is approx 60% moreover a normal study does not exclude a significant anomaly.
- At least 40 to 50% fetus with Down syndrome will have no recognizable sonographic abnormality.
- Subtle abnormalities like polydactyly and cleft palate are not looked up in a routine scan, which are surgically correctable after birth.
- Some conditions present late in intra uterine life and require serial follow up scans to confirm their presence.
- Few of the congenital abnormalities (Viz. functional / infection) will have no recognizable sonographic abnormality.

I, Dr. Satya Jha declare that while conducting ultrasonography on Mrs. Sonam Dilare, I have neither detected nor disclosed the sex of her fetus to anybody in any manner.

Thanks for the reference with regards.

DR. SATYA JHA (DNB, PDCC, EDiR)
Consultant Radiologist
MP - 23558

- Date of Birth → 06/04/1997.
- Height → 163 cm.
- Weight → 80 kg.
