1:250		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.	
1:1000		After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.	
1:10000		The PAPP-A level is high.

Trisomy 13/18 + NT		Please note that risk calculations are statistical approaches and have no diagnostic value!	
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.		The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).	
		The laboratory can not be held responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
