

Patient Name : MRS. G.SRILATHA

Patient Id/ Bil No. : 2407-0854

Gender/Age : Female /37 Years

Reg. Date : 29-07-2024

Referred By : DR PRASHANTHY EDWARDS (84534)

Reported Date : 30-07-2024

**DEPARTMENT OF RADIODIAGNOSIS AND IMAGING
SONOMAMMOGRAPHY OF BOTH BREASTS**

Clinical history : Lumps in both breasts

Technique:Ultrasound scan of breasts was performed with 7.5 MHz linear array transducer.

Findings:

RIGHT BREAST

Well encapsulated macro lobulated in homogenous hypoechoic lesion measures 34 x 19 x 29mm noted in the mammary space right breast at 9 o clock position in the peri areolar region.

Two small well encapsulated macro lobulated in homogenous hypoechoic lesion measures 9.8 x 4.3 ,8 x 3.2mm noted in the mammary space right breast at 6 o clock position in the peri areolar.

Two small well encapsulated macro lobulated in homogenous hypoechoic lesion measures 16 x 9.7 and 11 x 6 mm noted in the mammary space right breast at 11 o clock position in the

Well encapsulated macro lobulated in homogenous hypoechoic lesion measures 18 x 8mm noted in the mammary space right breast at 11 o clock position in the peri areolar region

LEFT BREAST

Well encapsulated macro lobulated in homogenous hypoechoic lesion measures 12 x 7 x 19.3 mm noted in the mammary space left breast at 1 o clock position in the peri areolar region.

Well encapsulated macro lobulated in homogenous hypoechoic lesion measures 16 x 8.9 mm noted in the mammary space left breast at 7 o clock position in the peri areolar region.

Well encapsulated macro lobulated in homogenous hypoechoic lesion measures 13 x 8mm noted in the mammary space left breast at 4 o clock position in the peri areolar region.

Well encapsulated macro lobulated in homogenous hypoechoic lesion measures 18 x 8mm noted in the mammary space left breast at 7 o clock position in the peri areolar region.

Both breasts reveal predominantly fibroglandular parenchymal pattern with scanty fatty components.

No other discrete focal mass/ collection / inflammatory changes /dilated ducts.

Pre mammary, mammary and retromammary spaces are normal.

Both nipples, skin and subcutaneous tissues appear normal.

Both axillary regions appear normal. No significant lymphadenopathy.

Visualized pectoralis muscles appear normal.

Few bilateral axillary lymph nodes noted with preserved benign morphology. No necrosis / matting / lymphadenitis.

IMPRESSION:

- **Multiple well encapsulated lobulated hypoechoic lesions in both breasts - probably benign lesions - likely fibro-adenomas**
- **Suggested clinical correlation.**
