

N A

Patient data			
Name	Mrs. SUNITA KALE		Patient ID
Birthday	10-02-1992		Sample ID
Age at sample date	32.5		Sample Date
Gestational age	13 + 3		
Correction factors			
Fetuses	1	IVF	no
Weight	74	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	12.17 mIU/mL	2.82	Gestational age
fb-hCG	49.37 ng/mL	1.59	Method
Risks at sampling date			Scan date
Age risk	1:461		Crown rump length in mm
Biochemical T21 risk	1:3509		Nuchal translucency MoM
Combined trisomy 21 risk	1:3961		Nasal bone
Trisomy 13/18 + NT	<1:10000		Sonographer
			Qualifications in measuring NT
			Trisomy 21
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.
			After the result of the Trisomy 21 test (with NT) it is expected that among 3961 women with the same data, there is one woman with a trisomy 21 pregnancy and 3960 women with not affected pregnancies. The PAPP-A level is high.
			The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!
			The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).
			The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
