5.1.0.17

Date of report:

14/08/24

N A

Patient data			
Name	Mrs. PREETI KAMBLE		Patient ID
Birth day	03/03/90	Sample ID	A0776460
Age at sample date	34.4	Sample Date	13/08/24
Gestational age	13 + 4		
Correction factors			
Fetuses	1	IVF	no
Weight	59	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	16.6 mIU/mL	2.78	Method
fb-hCG	39.65 ng/mL	1.24	CRL Robinson
Risks at sampling date			Scan date
Age risk	1:318		08/08/24
Biochemical T21 risk	1:4403		Crown rump length in mm
Combined trisomy 21 risk	<1:10000		68
Trisomy 13/18 + NT	<1:10000		Nuchal translucency MoM
			0.65
			Nasal bone
			present
			Sonographer
			N A
			Qualifications in measuring NT
			MD
		Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The PAPP-A level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
