

Patient Name : MRS. PRISILLA	Patient Id/ Bil No. : 2408-0523
Gender/Age : Female /30 Years	Reg. Date : 21-08-2024
Referred By : DR.E.P.FANNY ROWENA M.S GEN SURG	Reported Date : 21-08-2024

**DEPARTMENT OF RADIODIAGNOSIS AND IMAGING
SONOMAMMOGRAPHY OF BOTH BREASTS**

Clinical history : Lump in left breast

Technique:

Ultrasound scan of breasts was performed with 7.5 MHz linear array transducer.

Findings:

Large thick walled oval parallel cyst measuring 95 x 30 x 71 mm noted in mammary and retro-mammary space of left breast at 6 to 7 clock position in the inferomedial quadrant. Few small calcific foci noted along its walls. **No internal septae/echoes/fluid levels/adjacent inflammation/edema/probe tenderness/ communication with ducts.**

Both breasts reveal predominantly fibroglandular parenchymal pattern with scanty fatty components.

No discrete focal mass/ collection / inflammatory changes noted.

No evidence of dilated ducts.

Pre-mammary, mammary and retromammary spaces are normal.

Both nipples, skin and subcutaneous tissues appear normal.

Both axillary regions appear normal. No significant lymphadenopathy.

Visualized pectoralis muscles appear normal.

IMPRESSION:

- **Large thick walled cyst in left breast in the mammary and retro-mammary space of left breast in inferomedial quadrant - Likely abscess. (Bony origin has to be ruled out)**
- **Suggested clinical correlation.**
