

N A

Patient data			
Name	Mrs. MANASI KULKARBNI		Patient ID
Birthday	18/12/89	Sample ID	A0971296
Age at sample date	34.7	Sample Date	21/08/24
Gestational age	12 + 2		
Correction factors			
Fetuses	1	IVF	no
Weight	92	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	2.88 mIU/mL	1.36	
fb-hCG	42.5 ng/mL	1.08	
Risks at sampling date			
Age risk	1:289		Gestational age
Biochemical T21 risk	1:2795		Method
Combined trisomy 21 risk	1:9523		Scan date
Trisomy 13/18 + NT	<1:10000		Crown rump length in mm
			Nuchal translucency MoM
			Nasal bone
			Sonographer
			Qualifications in measuring NT
			Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 9523 women with the same data, there is one woman with a trisomy 21 pregnancy and 9522 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
