

N A

Patient data			
Name	Mrs. KOMAL ATUL DHUMAL		Patient ID
Birthday	24/08/98	Sample ID	A0919198
Age at sample date	26.0	Sample Date	24/08/24
Gestational age	12 + 2		
Correction factors			
Fetuses	1	IVF	no
Weight	50	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	20.85 mIU/mL	4.70	
fb-hCG	50.27 ng/mL	1.07	
Risks at sampling date			
Age risk		1:907	
Biochemical T21 risk		<1:10000	
Combined trisomy 21 risk		<1:10000	
Trisomy 13/18 + NT		<1:10000	
			Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The PAPP-A level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
