**DEPARTMENT OF RADIODIAGNOSIS AND IMAGING  
SONOMAMMOGRAPHY OF BOTH BREASTS**

**Clinical history : Lump in left breast**

**Technique:**

Ultrasound scan of breasts was performed with 7.5 MHz linear array transducer.

**Findings:**

Well defined irregular heterogenous hypoechoic anti parallel lesion measuring 31 x 20 x 23mm noted in the mammary space of left breast at 2-3 o'clock position. Few micro and macro calcific foci are noted within the lesion. There is mild prominence of adjacent ducts. Few micro and macro calcific foci noted within. Few adjacent tiny nodules noted.

Few discrete left axillary lymph nodes noted largest measuring 15 x 9mm. No loss of echotexture/micro-calcifications.

Both breasts reveal predominantly fibroglandular parenchymal pattern with scanty fatty components.

No other discrete focal mass/ collection / inflammatory changes noted.

Rest of pre-mammary, mammary and retro-mammary spaces are normal.

Both nipples, skin and subcutaneous tissues appear normal.

Visualised pectoralis muscles appear normal.

Few bilateral axillary lymph nodes noted with preserved benign morphology. No necrosis / matting / lymphadenitis.

**IMPRESSION:**

- **F/s/o malignant neoplasm of left breast as described.**
- **Suggested clinical correlation / FNAC correlation.**

**DR PRIYANKA  
RADIOLOGIST**
