

Patient Name : MRS. B.MAHESHWARI  
Gender/Age : Female /36 Years  
Referred By : DR P SUDHA RANI (58929)

Patient Id/ Bil No. : 2408-0677  
Reg. Date : 26-08-2024  
Reported Date : 28-08-2024

## **DEPARTMENT OF RADIODIAGNOSIS AND IMAGING SONOMAMMOGRAPHY OF BOTH BREASTS**

### **Clinical history : Check up..**

#### **Technique:**

Ultrasound scan of breasts was performed with 7.5 MHz linear array transducer.

#### **Findings:**

#### **RIGHT BREAST**

Simple cyst measuring 8.9 x 8.4 x 6.9mm noted in the mammary space of right breast at 10 o clock position

Simple cyst measuring 9.7 x 3.5 x 7.5mm noted in the mammary space of right breast at 3 o clock position

Simple cyst measuring 5.9 x 2.8mm noted in the mammary space of right breast at 1 o clock position

Three simple cysts measuring 4.2 x 2.6, 4.5 x 2.7, 4.1 x 3.1mm noted in the at 1 o clock position

Simple cyst measuring 4.4 x 4.0mm noted in the mammary space of right breast at 7 o clock position

#### **LEFT BREAST**

Thick walled simple cyst measuring 26 x 22 x 25mm noted in the mammary space of left breast at 11o clock position. Wall thickness measures 4.5mm. No echoes/nodules within. Mild probe tenderness is noted

Simple cyst measuring 6.7 x 4.3mm noted in the mammary space of left breast at 6 o clock position

Simple cyst measuring 6.9 x 3.5mm noted in the mammary space of left breast at 8 o clock position

Simple cyst measuring 7.1 x 4.7mm noted in the mammary space of left breast at 5 o clock position

**Few of the cysts are showing lobulated margins. Thin setae are noted within few of the cysts.**

Patient Name : **MRS. B.MAHESHWARI**  
Gender/Age : **Female /36 Years**  
Referred By : **DR P SUDHA RANI (58929)**

Patient Id/ Bil No. : **2408-0677**  
Reg. Date : **26-08-2024**  
Reported Date : **28-08-2024**

Both breasts reveal predominantly fibroglandular parenchymal pattern with scanty fatty components.

No other discrete focal mass/ collection / inflammatory changes noted.

No evidence of dilated ducts.

Premammary, mammary and retromammary spaces are normal.

Both nipples, skin and subcutaneous tissues appear normal.

Both axillary regions appear normal. No significant lymphadenopathy.

Visualised pectoralis muscles appear normal.

#### **IMPRESSION:**

- **Multiple cysts in bilateral breasts as described - s/o fibro cystic changes.**
- **Thick walled simple cyst (26 x 22 x 25mm )in mammary space of left breast at 11o clock position as described- ? cyst with chronic inflammation - advised FNAC correlation**
- **Suggested clinical correlation.**
