

Patient Name : MRS. S.R.RAJINI  
Gender/Age : Female /36 Years  
Referred By : DR PRASHANTH EDWARDS (84534)

Patient Id/ Bil No. : 2408-0686  
Reg. Date : 26-08-2024  
Reported Date : 28-08-2024

## **DEPARTMENT OF RADIODIAGNOSIS AND IMAGING SONOMAMMOGRAPHY OF BOTH BREASTS**

### **Clinical history : Check up..**

**Technique:** Ultrasound scan of breasts was performed with 7.5 MHz linear array transducer.

### **Findings:**

#### **RIGHT BREAST**

Small oval well en-capsulated oval parallel hypoechoic lesion measuring 12 x 9 x 5mm noted in mammary space of right breast at 9 o clock position in the periphery with ? hilum.

#### **LEFT BREAST**

Two well en-capsulated oval parallel hypoechoic lesion measuring 24 x 14 and 14 x 6.1mm noted in mammary space of left breast at 5 o clock position in the periphery with hilum. Few macrocalcifications noted within.

Both breasts reveal predominantly fibroglandular parenchymal pattern with scanty fatty components.

No other discrete focal mass/ collection / inflammatory changes/dilated ducts.

Premammary, mammary and retromammary spaces are normal.

Both nipples, skin and subcutaneous tissues appear normal.

Both axillary regions appear normal. No significant lymphadenopathy.  
Visualized pectoralis muscles appear normal.

### **IMPRESSION:**

- **Small oval well en-capsulated oval parallel hypoechoic lesion (12 x 9 x 5mm) in mammary space of right breast at 9 o clock position in the periphery - Likely fibroadenoma. Diff: Intramammary lymph-node**
- **Two benign lesions in left breast as described- Likely fibro-adenomas**
- **Suggested clinical correlation and FNAC for further evaluation.**
