NAME: MRS. SAVITA RAJENDRA NAJAN
AGE: 38 YEARS
STUDY: USG
REF BY: DR. PRAMOD NEMANE

DATE: 18-JUL-2024
SEX: F

HIGH RESOLUTION, HIGH FREQUENCY USG OF THYROID

Rt lobe thickness=26mm

Lt lobe thickness=14mm

Isthmus is normal

There is well defined heterogeneous, solid cystic mass of size 38x29mm noted in right lobe occupying near total right lobe, no abnormal vascularity or calcification

Otherwise Both the lobes of thyroid are normal in size, shape, echotexture & colour flow pattern. No other focal or diffuse lesion

No lymphadenopathy

IMPRESSION :

Favor partly degenerated benign adenoma in right thyroid lobe
correlate clinically

Thanks.....
