5.1.0.17

Date of report:

31/08/24

KALYANI MBBS DGO

Patient data			
Name	Mrs. E MOUNIKA		Patient ID
Birthday	22/03/95	Sample ID	A1161985
Age at sample date	29.4	Sample Date	30/08/24
Gestational age	12 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	49.5	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	16.01 mIU/mL	2.83	Method
fb-hCG	43.01 ng/mL	1.04	CRL Robinson
Risks at sampling date			Scan date
Age risk	1:698		30/08/24
Biochemical T21 risk	<1:10000		Crown rump length in mm
Combined trisomy 21 risk	<1:10000		68
Trisomy 13/18 + NT	<1:10000		Nuchal translucency MoM
			0.70
			Nasal bone
			present
			Sonographer
			N A
			Qualifications in measuring NT
			MD
			Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The PAPP-A level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
