PML/RAR α QUANTITATIVE ASSAY by Real Time PCR

Test Description	Test Report	Reference Range	
PML/RAR α (bcr1 & bcr3)	PML-RAR α (bcr1) /abl	Sample	Average % PML-RAR α
	NOT DETECTED (0%)	Negative	< 0.000157%
		Low +ve	0.00430%
		Moderate + ve	0.954%
		High +ve	12.25%

color	marker	Target	Ct	Conc. (copies)
Orange	BCR 3	Standard	22.80	100,000
Orange	BCR 1	Standard	30.17	10,000
Blue	ABL	Target	23.42	96,475
Red	BCR 3	Target	--	--
Green	BCR 1	Target	--	--

RESULT : Specimen is **NOT DETECTED** for bcr1 and bcr3 markers of PML-RAR α fusion transcript t(15;17)

INTERPRETATION

Real-time PCR is a sensitive, specific and precise method for quantification of nucleic acids over a vast dynamic range. This testing method combines real time PCR technique with **Taqman chemistry** for the detection of amplified product. In the present protocol bcr3 and bcr1 fusion fragments are amplified and quantified with standards and referral internal control (abl).
