INVIEW OF PREGNACY SONOGRAPHY, PLEASE NOTE :

- ◆ This report is not a final conclusive diagnosis.
 - ◆ All anomalies cannot be rule out by this or single or multiple sonography scan.
 - ◆ Assessment of foetal anomalies depends on foetal presentation, patient's build, mother's abdominal wall thickness, foetal position, liquor volume, limbs-palm-face attitude, period of gestation with available organogenesis at that time & foetal movements during scanning or study.
 - ◆ Minor surface anomalies or single isolated anomaly such as foot, palm, extrimities, eye & face disfigment may be missed by this single study or even by repeated scanning.
- THIS PAPER CAN NOT BE USED FOR MEDICO-LEGAL PURPOSE**
- ◆ This investigation has been done as per advice of referring doctor.
 - ◆ Sonography is operator dependent & facilities in machine dependent technique, findings, may vary with other machine & its operator.
 - ◆ Images cast by X-ray as well as ultrasound depend on various shadows produced by both abnormal & normal structures shadows of many diseases can look alike, hence many limitations in interpretation of shadows.
 - ◆ This report is meant to assist referring doctor to have an idea if disease process, if any. This report is to be - related clinically & with other laboratory investigations.
 - ◆ The report indicates only one of the various possibilities which is to confirmed with further investigations as required.
