

Prisca 5.1.0.17
Date of report: 11/09/24

K.SOWMYA REDDY

Patient data			
Name	Mrs. P SWATHI	Patient ID	0012409090446
Birthday	24/02/00	Sample ID	A1161847
Age at sample date	24.5	Sample Date	09/09/24
Gestational age	12 + 5		
Correction factors			
Fetuses	1	IVF	no
Weight	47	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	5.93 mIU/mL	1.05	12 + 5
fb-hCG	37.5 ng/mL	0.86	Method
			CRL Robinson
			Scan date
			09/09/24
Risks at sampling date		Trisomy 21	
Age risk	1:986	Crown rump length in mm	65
Biochemical T21 risk	1:9429	Nuchal translucency MoM	0.78
Combined trisomy 21 risk	<1:10000	Nasal bone	unknown
Trisomy 13/18 + NT	<1:10000	Sonographer	K.SOWMYA REDDY
		Qualifications in measuring NT	MD
Risk graph showing Age Risk (1:10000) and Combined Risk (1:986) against Gestational Age. The graph is divided into three regions: green (below cut off), yellow (Below Cut Off, but above Age Risk), and red (above cut off). A vertical line at 12+5 weeks indicates the current risk level, which is in the green region.		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
		The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
