The chart shows a red area at the top, a yellow area in the middle, and a green area at the bottom. A vertical line at age 23 is within the green area. The y-axis is labeled with risk ratios: 1:10, 1:100, 1:250, 1:1000, 1:10000. The x-axis is labeled 'Age' and ranges from 13 to 49. A 'Cut off' line is indicated.		The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The PAPP-A level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!	
Trisomy 13/18			
The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.
