Patient data				
Name	Mrs. KAVITA TAMBAKHE		Patient ID	0372409070070
Birthday	25-03-1985		Sample ID	A0423387
Age at sample date	39.5		Sample Date	07-09-2024
Gestational age	13 + 4			
Correction factors				
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies
Weight	60	diabetes	no	
Smoker	no	Origin	Asian	
Biochemical data			Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age	13 + 3
PAPP-A	0.71 mIU/mL	0.12	Method	CRL Robinson
fb-hCG	28.6 ng/mL	0.90	Scan date	06-09-2024
Risks at sampling date			Crown rump length in mm	
Age risk	1:95		75.5	
Biochemical T21 risk	>1:50		Nuchal translucency MoM	
Combined trisomy 21 risk	1:66		0.70	
Trisomy 13/18 + NT	>1:50		Nasal bone	
			present	
			Sonographer	
			N A	
			Qualifications in measuring NT	
			MD	
Trisomy 21				
The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. After the result of the Trisomy 21 test (with NT) it is expected that among 66 women with the same data, there is one woman with a trisomy 21 pregnancy and 65 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!				
Trisomy 13/18 + NT				
The calculated risk for Trisomy 13/18 test (with nuchal translucency) is >1:50, which indicates an increased risk.
