

Date of report: **01/10/24**
Prisca 5.1.0.17

ASHWINI

Patient data				Ultrasound data	
Name		Mrs. NASHRA		Gestational age	13 + 6
Birthday		30/09/01		Method	CRL measurements
Age at delivery		23.5		Crown rump length in mm	82
Patient ID		0352409300005		Date	28/09/24
Previous trisomy 21 pregnancies		unknown		Nuchal translucency MoM	0.77
				Nuchal translucency	1.50 mm
Correction factors				Nasal bone	unknown
Fetuses	1	diabetes	no	Sonographer	N A
Weight	55	Origin	Asian	Qualifications in measuring NT	MD
Smoker	no	IVF	no		
Biochemical data				Risks at term	
Sample Date		30/09/24		Age risk	1:1447
Gestational age at sample date		14 + 1		Trisomy 21 risk	1:3086
Parameter	Value	Corr. MoMs		Combined trisomy 21 risk	<1:10000
AFP	32.9 ng/mL	1.24		Trisomy 18 risk	<1:10000
HCG	78881.9 mIU/mL	1.70			
uE3	0.61 ng/mL	2.34			
Risk				Trisomy 21	
				The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.	
				After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 18				Neural tube defects	
The calculated risk for trisomy 18 (with nuchal translucency) is < 1:10000, which represents a low risk.				The corrected MoM AFP (1.24) is located in the low risk area for neural tube defects.	

below cut off
