Helps to lead a Quality Life

Patient Name : Mrs.R CHANDRA KALA
Age/Gender : 46 Years/ Female
Referred by : Dr.SRI DHARANI HOSPITAL

Regno : KUS14856
Reg Date : 21/09/2024 12:34:31
Report Date : 21/09/2024 13:09:40

DEPARTMENT OF RADIOLOGY AND IMAGING SCIENCES Ultrasound of the Whole Abdomen

Complaints: Pain abdomen.

Findings:

Liver is normal in size (10.7 cm) and shows mildly raised parenchymal echogenicity. No focal mass lesion is seen. The intra-hepatic biliary and vascular channels are normal in appearance. The portal vein is patent with normal diameter. Common Bile Duct is normal in diameter for the age.

Gall bladder is well distended and Shows few calculi , largest measuring 6.05 mm.

Pancreas visualized part of the head and the body appears fairly normal in appearance. Tail portion is obscured by bowel gases. The main pancreatic duct is not dilated. No focal lesion is seen.

Spleen is mildly enlarged in size (12.7 cm) and echotexture. No focal lesion is seen.

Both the kidneys are visualized.

Right kidney measures 109 x 45 mm. It appears normal in size, shape, outline and echotexture. No obvious calculus / mass or any hydronephrosis is seen.

Left kidney measures 104 x 26 mm. It appears normal in size, shape, outline and echotexture. No obvious calculus / mass or any hydronephrosis is seen.

Cortico-medullary differentiation is well appreciated in both the kidneys.

Urinary bladder is well distended and shows normal wall thickness and no obvious calculus within.

Uterus is anteverted and appears to be normal in shape and size. It measures about 64 x 29 x 44 mm. Myometrium shows normal echotexture. No obvious space occupying lesion is noted in present transabdominal scan. Endometrium appears normal and measures about 4.4 mm. Cervix appears normal.

Right ovary is visualized and measures about 31 x 13 mm. It shows normal echotexture.

Left ovary is visualized and measures about 31 x 16 mm. It shows normal echotexture.

No obvious adnexal lesion is noted in present trans abdominal scan. No obvious free fluid is seen in POD.

No evidence of any free fluid in abdomen and pelvis in present scan. No evidence of any significantly enlarged lymph nodes in present scan. Major vessels like IVC and Aorta appear normal.

IMPRESSION:

Grade - I fatty liver.

Cholelithiasis.

Mild splenomegaly.

No other Significant abnormality noted in present scan.

Please correlate clinically.

Note: The impression is an expert opinion and not a final diagnosis as the findings need to be correlated with clinical findings and other investigations. The accuracy of the report is mainly dependent on the bowel preparation at the time of the examination, physical built of the patient and technical specifications of the USG machine examined with.

DISCHARGE SUMMARY

Patient's Name : Mrs. Re Chandrakala

Age : 46y Sex : Female

Consultant : Dr. Revanth Kumar (G.S. Surgeon) D.O.A. : 20/9/2024

Diagnosis : A. cholelithiasis. B.D.M D.O.D. : 24/9/2024

Chief Complaints :-

90 (1) upper rt side pain on & off

Investigations :-

All Reports Enclosed.

Treatment Given :- Pt Admitted with above Complaints
All necessary investigation was done.

8/9 lap cholecystectomy & G.A done on 21/9/2024
Drain kept on (1) side. Drain removed on 24/9/2024
ASD done & treated with I.V antibiotics I.V ceftriaxone
I.V. F & other supportive medication
