MANSI GULATI

Patient data			
Name	Mrs. SAPNA KUSHWAHA		Patient ID
Birthday	01-08-1995		Sample ID
Age at sample date	29.2		Sample Date
Gestational age	12 + 3		
Correction factors			
Fetuses	1	IVF	no
Weight	87	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	3.74 mIU/mL	1.55	Method
fb-hCG	41.12 ng/mL	1.07	Scan date
Risks at sampling date			Crown rump length in mm
Age risk	1:708		59
Biochemical T21 risk	1:8994		Nuchal translucency MoM
Combined trisomy 21 risk	<1:10000		0.65
Trisomy 13/18 + NT	<1:10000		Nasal bone
			unknown
			Sonographer
			N A
			Qualifications in measuring NT
			MD
Trisomy 21			
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
