PATIENT NAME : MRS. SAVITA BAGDE

REF. BY : DR. P.PRASAD

DATED : 26 September, 2024

SONOGRAPHY OF PELVIS (TVS)

Uterus measures 5.3 x 4.2 x 3.2 cm and is normal in size, shape and outline showing normal parenchymal echotexture.

An approx 1.4 x 1.0 cm sized well-circumscribed hypoechoic mass lesion is seen in the posterior wall of the uterus in the body region.

Right ovary is normal in size, shape and outline.

E/o well defined heterogeneously hyperechoic lesion of approx size 5.6 x 5.4 x 4.3 cm (volume-71cc) in left adnexa. Left ovary is visualised along the lesion.

Cervix appears normal.

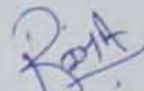

Endometrial thickness is 6.2 mm

Endometrial cavity is empty.

No free fluid seen in cul-de-sac.

OPINION:

- Posterior uterine wall fibroid.
- Heterogeneously hyperechoic lesion in left adnexa, most probably complex left ovarian mass / ? dermoid cyst.
- Suggested further evaluation by CECT pelvis.
