USG OBSTETRICS WITH TARGETED IMAGING FOR FOETAL ANOMALIES (TIFFA)

Single live intrauterine fetus with Breech presentation is seen at the time of examination.
Liquor is adequate in amount.

The cardiac pulsations and fetal movements are well seen.

The fetal heart rate is = 134 b/minute.

The approximate gestational age is as follows:

Biparietal diameter	= 4.71cm corresponds to 20.2 weeks.
Head circumference	= 17.04 cm corresponds to 19.5 weeks.
Abdominal circumference	= 15.17 cm corresponds to 20.3 weeks.
Femur length	= 2.99 cm corresponds to 19.2 weeks.
TIB	= 2.67 cm corresponds to 19.4 weeks.
FIB	= 2.60 cm corresponds to 19.0 weeks.
HL	= 3.03 cm corresponds to 20.0 weeks.
RAD	= 2.84 cm corresponds to 20.5 weeks.
Ulnar	= 2.88 cm corresponds to 20.5 weeks.
Cereb	= 2.01 cm corresponds to 19.2 weeks.

Placenta- Posterior wall, upper and mid uterine segment. Grade-II maturity.

No obvious gross fetal anomaly is noticed in this examination.

The internal os and cervical canal are unremarkable.

The cervix is normal (4.9 cm).

TEST REPORT

NAME : MRS. RINKEE MAHOBIA

AGE : 31 YEARS

SEX : F

IMPRESSION:-

- Single Live Intrauterine Pregnancy Breech Presentation Is Seen At The Time Of Examination Of 19 weeks + 06 days.
- Prominent bilateral fetal renal pelvis.
- Small choroid plexus cyst in left lateral ventricle of fetal brain.

Advice: - Quadruple marker test correlation.

(All measurement including foetal weight is subject to statistical variation. Fetal echo is not done.)

Note: - I Declare that while conducting USG, i have neither detected nor disclosed the sex of her fetus to any body in any manner.

Not all anomalies can be detected on sonography. Detection of anomalies is dependent on fetal position, gestational age. Maternal abdominal obesity and other technical parameters. Fetal limb anomalies not always detectable due to position. Follow up scanning and second opinion are always advisable. For detection of cardiac anomaly foetal echography is necessary. Ear anomalies cannot be detected.

These reports are for assisting doctors, physicians in their treatment and not for medico legal purpose and should be related clinically.

Pathological Investigation/Radiological Impression are merely opinion and the final diagnosis as they are based on available auto generated/imaging finding. These opinions should be correlated with clinical findings a review of further evaluation may be sought whenever considered appropriate.
Condition of Reporting: 1 It is presumed that the Specimen belongs to the patient named in the test request form. 2 A test request might not be performed for following reasons: a. Insufficient Specimen quality b. Unacceptable Specimen quality c. Incorrect specimen type d. Test cancelled either on request of patient or doctor, or because of incorrect code, test name or specimen received. It is expected that a fresh specimen (will be sent for the purpose of reporting on the same parameters(S), if required
