KRANTHI DIAGNOSTICS

Patient data			
Name	Mrs. SUBHADRA		Patient ID
Birthday	19-10-1993	Sample ID	
Age at sample date	31.0	Sample Date	
Gestational age	11 + 3		
Correction factors			
Fetuses	1	IVF	no
Weight	41	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	2.57 mIU/mL	0.68	
fb-hCG	50.93 ng/mL	0.83	
Risks at sampling date		Trisomy 21	
Age risk	1:541	Gestational age	11 + 2
Biochemical T21 risk	1:2090	Method	CRL Robinson
Combined trisomy 21 risk	<1:10000	Scan date	18-10-2024
Trisomy 13/18 + NT	<1:10000	Crown rump length in mm	47
		Nuchal translucency MoM	0.78
		Nasal bone	present
		Sonographer	N A
		Qualifications in measuring NT	MD
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
		Trisomy 13/18 + NT The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
