

Name	: G.RAJESHWARI	
Sample ID	: A0593616	
Age/Gender	: 21 Years/Female	Reg. No : 0352410050017
Referred by	: Dr. MEDCARE REACH HOSPITAL	SPP Code : SPL-STS-076
Referring Customer	: VIJAYA MULTISPECIALITY HOSPITAL	Collected On : 05-Oct-2024 10:15 AM
Primary Sample	:	Received On : 07-Oct-2024 05:36 PM
Sample Tested In	: Tissue	Reported On : 13-Oct-2024 12:02 AM
Client Address	: Behind bank of baroda	Report Status : Final Report

## HISTOPATHOLOGY

### BIOPSY-Small Specimen (< 2cm)

**Histopathological Number** : HP 8089/2024  
**Site of Biopsy** : Breast tissue  
**Gross Examination** : Received single grey white yellow soft tissue bit measuring 2 x 1 x 0.5 cm, cut section grey white to grey brown yellow. A/E in one block.

**Microscopic Examination** : Sections studied reveal hyperplastic fibrous connective tissue stroma with lactiferous ducts and tubules lined by hyperplastic cuboidal to columnar epithelium with focal stratification and apocrine metaplasia. Few ducts are compressed and dilated. Individual stromal cells are indistinct with moderate eosinophilic cytoplasm and have spindle shaped nuclei, with adjacent congested blood vessels and non-specific inflammatory cells.  
No evidence of granulomas / malignancy.

**Impression** : Histopathological features are suggestive of Fibroadenoma - breast

Advised clinical , radiological correlation

**Note** : All biopsy specimen will be stored for 15 (fifteen) days, blocks and slides for 10 (ten) years only from the time of receipt at the laboratory. No request will be entertained after the specified period.
