NAME:	Mrs. PRACHEE TIWARI	AGE/SEX:	32 YRS / F
REF. BY:	Dr. KAVITA BABBAR (MBBS, MD, FICOG)	DATE:	16.09.24

USG OBSTETRICS

Indication: for viability and dating.

LMP: 03.07.24

GA by LMP: 6W 6D

EDD By LMP: 06.05.25

- Uterus is gravid with normal thickness, regular gestational sac at fundal region.
- Single, live intrauterine gestational sac, fetal pole seen.
- Fetal movement and cardiac activity are present.

CRL	0.7 cm	6weeks 4Days
FHR		128 bpm
Yolk sac		Seen

- EDD by USG = 08.05.25(± 5days).
- Cervical length is normal (3.4cm). Internal OS is closed.
- No e/o any subchorionic collection seen.
- No adnexal mass seen.

Impression:

- Single live intra-uterine gestation of mean gestational age of 6weeks 4days.

(I Dr Nidhi Kashyap Declare that during USG scan on Mrs. PRACHEE TIWARI I have neither detected nor disclosed the sex of her fetus to anybody in any manner).

Advice: NT/NB scan at 11- 14th weeks to evaluate early chromosomal ultrasound markers.

Dr. Nidhi Kashyap

Disclaimer: Patient identity is based on her own declaration. This investigation is done as per the request of the referring doctor. Proper history and details of previous sonomedical history are to be provided. In spite of utmost care taken, all measurements are subjected to statistical variations. Diagnosis of ultrasound is based on various echoes and shadows produced by both normal and abnormal tissues. Inaccuracy in diagnosis can occur due to technical pitfalls like false positive and false negative results. In case of discrepancy between report and clinical evaluation and/or laboratory tests, second opinion is always advisable before commencing treatment. Not for medico-legal purpose.
