determination method		Scan						
Risk				Trisomy 21				
				<p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b></p> <p>After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.</p> <p>Please note that risk calculations are statistical approaches and have no diagnostic value!</p>				
Trisomy 18				Neural tube defects risk				
<b>The calculated risk for trisomy 18 is &lt; 1:10000, which indicates a low risk.</b>				<b>The corrected MoM AFP (1.62) is located in the low risk area for neural tube defects.</b>
