Patient data			
Name	Mrs. V MAMATHA		Patient ID
Birthday	03/09/90		Sample ID
Age at sample date	34.2		Sample Date
Gestational age	11 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	46	diabetes	no
Smoker	no	Origin	Asian
			Previous trisomy 21 pregnancies
			unknown
Biochemical data			Ultrasound data
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	3.69 mIU/mL	0.83	Method
fb-hCG	69.06 ng/ml	1.38	CRL Robinson
Risks at sampling date			Scan date
Age risk			15/11/24
Biochemical T21 risk			Crown rump length in mm
Combined trisomy 21 risk			54
Trisomy 13/18 + NT			Nuchal translucency MoM
			0.49
			Nasal bone
			present
			Sonographer
			NA
			Qualifications in measuring NT
			MD
Trisomy 21			
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 3382 women with the same data, there is one woman with a trisomy 21 pregnancy and 3381 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
