5.1.0.17

Date of report:

20/11/24

NA

Patient data					
Name	Mrs. KALPANA MISHRA TWIN A		Patient ID	0782411160013	
Birthday	16/11/91		Sample ID	A0323189 TWIN A	
Age at sample date	33.0		Sample Date	16/11/24	
Gestational age	12 + 6				
Correction factors					
Fetuses	2	IVF	no	Previous trisomy 21 pregnancies	unknown
Weight	71	diabetes	no		
Smoker	no	Origin	Asian		
Biochemical data			Ultrasound data		
Parameter	Value	Corr. MoM	Gestational age	12 + 2	
PAPP-A	4.14 mIU/mL	0.53	Method	CRL Robinson	
fb-hCG	82.87 ng/ml	1.10	Scan date	12/11/24	
Risks at sampling date			Crown rump length in mm	60	
Age risk	1:412		Nuchal translucency MoM	1.09	
Biochemical T21 risk	1:463		Nasal bone	present	
Combined trisomy 21 risk	1:1591		Sonographer	NA	
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	MD	
Trisomy 21			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 1591 women with the same data, there is one woman with a trisomy 21 pregnancy and 1590 women with not affected pregnancies. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!		
Trisomy 13/18 + NT					
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
