| Risk | | Trisomy 21 | | |
|  | | <p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</p> <p>After the result of the Trisomy 21 test it is expected that among 361 women with the same data, there is one woman with a trisomy 21 pregnancy and 360 women with not affected pregnancies.</p> <p>The HCG level is high.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.</p> <p>Please note that risk calculations are statistical approaches and have no diagnostic value!</p> | | |
| Trisomy 18 | | Neural tube defects risk | | |
| <p>The calculated risk for trisomy 18 is < 1:10000, which indicates a low risk.</p> | | <p>The corrected MoM AFP (1.65) is located in the low risk area for neural tube defects.</p> | | |
