22-11-2024

TRIVENI MS(O,B,G)

Patient data			
Name	Mrs. DIVYA		Patient ID
Birthday	10-06-2006	Sample ID	
Age at sample date	18.4	Sample Date	
Gestational age	12 + 0		
Correction factors			
Fetuses	1	IVF	no
Weight	48	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	4.33 mIU/mL	0.96	
fb-hCG	42.45 ng/ml	0.89	
Risks at sampling date			
Age risk		1:1085	
Biochemical T21 risk		1:8051	
Combined trisomy 21 risk		<1:10000	
Trisomy 13/18 + NT		<1:10000	
Risk graph for Trisomy 21. The y-axis represents risk (1:10, 1:100, 1:250, 1:1000, 1:10000) and the x-axis represents age (13-49). The green area represents Age Risk, the yellow area represents Biochemical Risk, and the red area represents Combined Risk. A vertical line at age 18.4 indicates the patient's age. The combined risk is below the 1:10000 threshold.			Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
			Trisomy 13/18 + NT The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
