

Prisca

5.1.0.17

Date of report: 26-11-2024

NA

Patient data				
Name	Mrs. CH.PRANEETHA TWIN-A		Patient ID	0212411240008
Birthday	11-10-1997		Sample ID	A1691326 TWIN-A
Age at sample date	27.1		Sample Date	24-11-2024
Gestational age	11 + 3			
Correction factors				
Fetuses	2	IVF	no	Previous trisomy 21 pregnancies
Weight	69	diabetes	no	
Smoker	no	Origin	Asian	
Biochemical data			Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age	11 + 3
PAPP-A	2.69 mIU/mL	0.63	Method	CRL Robinson
fb-hCG	54.64 ng/ml	0.53	Scan date	24-11-2024
Risks at sampling date			Crown rump length in mm	48.2
Age risk	1:817		Nuchal translucency MoM	0.99
Biochemical T21 risk	1:6782		Nasal bone	present
Combined trisomy 21 risk	<1:10000		Sonographer	NA
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	MD
RISK			Trisomy 21	
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT				
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
