NA

Patient data				
Name	Mrs. FAUZIYA BANO TWIN A		Patient ID	0482411260177
Birthday	15-03-2002		Sample ID	A1529569 TWIN A
Age at sample date	22.7		Sample Date	26-11-2024
Gestational age	12 + 2			
Correction factors				
Fetuses	2	IVF	no	Previous trisomy 21 pregnancies
Weight	64	diabetes	no	
Smoker	no	Origin	Asian	
Biochemical data			Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age	12 + 1
PAPP-A	3.21 mIU/mL	0.47	Method	CRL Robinson
fb-hCG	104.36 ng/ml	1.19	Scan date	25-11-2024
Risks at sampling date			Crown rump length in mm	58
Age risk	1:1030		Nuchal translucency MoM	0.86
Biochemical T21 risk	1:702		Nasal bone	present
Combined trisomy 21 risk	1:4146		Sonographer	NA
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	MD
RISK			Trisomy 21	
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 4146 women with the same data, there is one woman with a trisomy 21 pregnancy and 4145 women with not affected pregnancies. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT				
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
