

NA

Patient data			
Name	Mrs. GAYATHRI	Patient ID	0352412010002
Birthday	13-04-2003	Sample ID	a1251636
Age at sample date	21.6	Sample Date	01-12-2024
Gestational age	13 + 2		
Correction factors			
Fetuses	1	IVF	no
Weight	47	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	14.52 mIU/mL	1.77	
fb-hCG	35.84 ng/ml	0.99	
Risks at sampling date			
Age risk		1:1089	
Biochemical T21 risk		<1:10000	
Combined trisomy 21 risk		<1:10000	
Trisomy 13/18 + NT		<1:10000	
			Trisomy 21
			<p>The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.</p> <p>After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>
<p>The graph shows the relationship between maternal age and the risk of trisomy 21. The y-axis represents the risk ratio (1:10 to 1:10000) and the x-axis represents the age (13 to 49). A red area indicates risk above the cut-off, a yellow area indicates risk below the cut-off but above age risk, and a green area indicates risk below the cut-off. A black vertical bar is at age 21.6.</p>			
Trisomy 13/18 + NT			
<p>The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.</p>
