Down's Syndrome Risk

The calculated risk for Trisomy 21 is below the cut off which represents a low risk.

After the result of the Trisomy 21 test it is expected that among 1844 women with the same data, there is one woman with a trisomy 21 pregnancy and 1843 women with not affected pregnancies.

The uE3 level is low.

The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!

Neural tube defects risk

Risk for trisomy 18

The corrected MoM AFP (1.15) is located in the low risk area for neural tube defects.

The calculated risk for Trisomy 18 is 1:3488, which indicates a low risk.
