### IMPRESSION

- Single live intrauterine foetus with variable presentation is seen at the time of examination, which corresponds, to Gestational age 12 Weeks 3 days. EDD-13.06.2025 +/- 10 Days.

Advice- Anomaly scan at 18-22 weeks.

**Disclaimer:-**  
 Please note that USG study has certain limitations. Sometimes fetal anomalies may not get diagnosed due to nature of anomaly, Gestational age, foetal positioning and limitations of machine, hence absence of mention of foetal anomaly in study does not always rule out its possibility. (Fetal echo is not included in this scan).

**Declaration:-** I declare that while conducting Ultrasonography/ Image Scanning on patient, I have neither detected nor disclosed the sex of her fetus to anybody in any manner.
