

Mediconic Diagnostic Centre

A LEGACY FOR EXCELLENCE !

Name	Mr ASHISH WAGHMARE	Age	38 Years
Patient ID	MDC/2611/2024-2025/5021	Gender	MALE
Ref By	AADHAR HOSPITAL	Date	26/11/2024

ULTRASONOGRAPHY OF ABDOMEN AND PELVIS

The liver is normal in size (14.3 cm). It shows grade I fatty changes. No focal lesion is seen. The intrahepatic biliary radicals, common bile duct, and portal vein are normal. IVC and hepatic veins appear normal.

The gall bladder is well distended. No calculus or changes of cholecystitis are seen. Pancreas could not be visualized due to extensive overlying bowel gases. The spleen is normal. No focal splenic lesion is noted.

Right kidney measures 90 x 44 mm and left kidney measures 111 x 49 mm. Both kidneys are normal in size and echotexture. There is no evidence of calculi or hydronephrosis on either side.

The urinary bladder is well distended. No bladder calculus or cystitis is seen. Normal appearance of the prostate.

No ascites or lymphadenopathy is seen.

Mild bowel wall thickening is seen in visualized small bowel loops in RIF and ascending colon. Surrounding mesentery is inflamed. Appendix is not visualized due to inflammatory changes and bowel gases.

7 mm sized anterior abdominal wall defect noted in umbilical region. Omentum is seen herniating through this defect on valsalva maneuver and reducing completely on rest. No herniation of bowel loops is identified.

IMPRESSION

Ileo colitis.

Grade I fatty changes in liver.

Umbilical hernia.

Suggest: Follow up if clinically indicated.
