Diagnosis: No obvious anomaly seen for the period of gestation

Comments : Today's ultrasound has revealed single live fetus with gestational age of 19 weeks and 4 days. There are no obvious structural defects at this period of gestation. The fetal growth and liquor appear adequate. Placenta posterior low, partially covering internal os.

Advise : Surveillance for fetal growth restriction (High resistance in bilateral uterine arteries)

However, the couple is aware that ultrasonography cannot exclude all the chromosomal abnormalities or genetic syndromes.

I, Dr. Surabhi Dube, declare that while conducting the ultrasonography/ image scanning of Mrs. Rutika Goray, neither detected nor disclosed the fetal gender to anybody in any manner.

Note: Assessment of fetal anomalies depends on fetal position, liquor volume and period of gestation at the time of scan, hence all anomalies cannot be excluded by ultrasonography.
