

Name : MRS. Shradha Pandhare
Ref By : Dr. Pradeep Musale
Age/Sex : 27 YEARS/F
Date : 07 Dec 2024

OBSTETRIC USG

LMP: 09/09/2024 Wks of amenorrhea: 12 wks 5 days
EDD BY LMP : 16/07/2025 EDD BY USG: 17/07/2025
Transabdominal Sonography was done. There is a single live intrauterine gestation.
Yolk sac is seen within. Foetal pole is seen. Cardiac activity is seen. FHR: 153 B/min.
Nuchal Translucency is normal, (NT 1.4mm).
Fundic bubble, nasal bone, limb buds, and spine appear normal.
Placenta is anterior developing, low lying touching to os may migrate upwards.
Ductus waveforms appears normal
Internal os is closed. Cervical length adequate.

Fetal growth parameters are as follows:

PARAMETERS	SIZE IN CM	WEEKS	DAYS
BPD	1.8	12	5
CRL	5.6	12	2

IMPRESSION: Single live intrauterine gestation of around 12 wks 4 days.

Advied: - follow up at 19-20 wks for Anomaly scan.

*Declaration of the doctor - I Dr .Shivrudra P Shette, declare that while conducting USG I have neither disclosed the sex of her fetus to anybody in any manner.
(All measurements are subject to statistical variations. Not all anamolies can be detected on sonography, as visualization of structures depend upon fetal position, gestation age, liquor amount, maternal abdominal thickness & machine resolution).*

Dr. Shivrudra Shette
