ULTRASOUND BREAST (SINGLE)

Real time sonography of the breast was performed.

FINDINGS:

The breast shows glandular tissue with normal echotexture.

No focal mass lesions/calcifications noted.

Nipple and subareolar regions are normal.

Pectoral muscles appear normal.

Multiple enlarged lymphnodes in the right axillary region and along the anterior chest wall along the lateral and superior aspect. Largest measuring 25 x 20 mm. Mild surrounding edema is noted.

A collection with internal echoes measuring 25 x 15 mm in the lateral and superior aspect of right anterior chest wall.

IMPRESSION:

*** Multiple enlarged lymphnodes in the right axillary region and along the anterior chest wall along the lateral and superior aspect ? Koch's. Suggested clinical correlation and FNAC.**

*** A collection with internal echoes in the lateral and superior aspect of right anterior chest wall.**
